Personal Experience

Freelance Software Engineer, June '15 to present - LAYR CONSULTING

Managed the full lifecycle of contracts by developing technical requirement, creating mock designs, communicating expectations, developing the product, presenting demos, and retaining finish products.

- Created custom PHP based API for complex system used to manage 6000+ users, 1500+ organizations, advertisement, newsletters, and a national conference.
- Maintained a positive and productive client-contractor relationship throughout the lifecycle of the contract.
- Operated effective remote small group meetings and pair programming sessions.

Student Worker Systems Administrator, July '12 to August '15 - TEXAS STATE UNIVERSITY (CORE SYSTEMS)

Configured, deployed, and supported any and all university department's custom needed services as well as any core business services such as SAP.

- Maintained reliable and effective hardware at Texas State University's three main data centers containing around 200 servers.
- Developed and maintained a customized inventory system with ticketing capabilities for the hardware across all datacenters.

Operations team Intern, May '14 to September '14 - EDGECASE

Collaborated and communicated with both software developers and IT professionals to identify bottlenecks in the software delivery process.

- Designed and developed a custom CMS leveraging google docs to increase productivity, decrease training time, and reduce rework of a mission critical process.
- Operated my project in a weekly sprint agile development environment. Including meeting with other departments and company executives to manage project expectations.
-

Personality Traits

- Thorough, ambitious, and very fast learner.
- Ability to work under deadlines and pressure.
- Excellent team member or leader with strong communication skills.
